PROFESSIONAL SUMMARY

Senior Hosting and Infrastructure Engineer with 5+ years supporting and building production systems across bare metal, VPS, and cloud platforms. Currently operating at L3 level, combining deep Linux systems expertise with hands-on development of internal tooling, automated monitoring, and operational platforms that directly support 24/7 hosting operations. Experienced in incident response, on-call escalation design, and cross-platform automation. Looking to move into an infrastructure-focused or senior technical support role where I can continue building reliable systems at scale.

KEY ACHIEVEMENTS

Designed and built a production support operations platform from scratch, now used daily by the engineering team. Key outcomes include:

- **Unified Support Dashboard** — Real-time ticket aggregation across three platforms (Ubersmith ICS, Ubersmith VPS, Zoho Desk) with RBAC, engineer workload tracking, and automated cache warming. Achieved 40x performance improvement through two-tier caching architecture.
- **Automated OOH Callout System** — Four-tier VictorOps paging automation (VIP, Priority, Keyword, Watched Tickets) with deduplication, business hours logic, snooze controls, and audit logging. Handles overnight escalation for 19 VIP clients without manual intervention.
- **Zabbix Monitoring Automation** — Built automated deployment pipeline for Zabbix agent installation and configuration across 500+ servers, standardising monitoring coverage and reducing manual provisioning time.
- **DR and Failover Infrastructure** — Implemented active-passive disaster recovery with 60-second data replication between London and Salt Lake City data centres, including automated cutover and failback procedures.
- **Customer Communication Automation** — Mailchimp integration for maintenance notifications and service changes, with customer lookup tooling via Ubersmith API and Zoho SalesIQ chatbot for automated customer verification and support routing.

TECHNICAL SKILLS

Operating Systems	Linux (RHEL, AlmaLinux, Rocky, CentOS, Ubuntu), Windows Server
Automation / IaC	Ansible, Chef, StackStorm, Bash, Python, PHP (familiar with Terraform)
Monitoring	Zabbix, Nagios, Grafana, Splunk/VictorOps (on-call and incident management)
Virtualisation	VMware, vCloud Director, Hyper-V, OpenStack
Web / Hosting	Apache, Nginx, cPanel, Plesk, DNS, SSL/TLS, MySQL/MariaDB
APIs / Integration	REST APIs, Ubersmith, Zoho Desk, Zoho SalesIQ, Mailchimp, VictorOps
Tooling	Git, GitHub, Docker, Atlassian Suite (Confluence, Jira), SQLite
Cloud / Infra	Microsoft Azure, OpenStack, bare metal provisioning, RAID, LVM, networking

PROFESSIONAL EXPERIENCE

Hosting Support Engineer (Cloud Services – Linux Operations & Infrastructure)

THG Ingenuity Cloud Services • November 2021 – Present

- Provide L3 technical support for external customers across bare metal, VPS, and cloud hosting platforms, acting as an escalation point for critical incidents, hardware diagnostics, and application-layer faults.
- Designed and built a production support operations platform used daily by the team: real-time ticket dashboard, automated VictorOps callout system, engineer workload tracking, and OOH reporting — all integrated with Ubersmith and Zoho Desk APIs.
- Built and deployed automated Zabbix monitoring across 500+ servers, standardising agent configuration and reducing provisioning overhead.

- Implemented disaster recovery infrastructure with 60-second replication between London and Salt Lake City, with documented cutover and failback procedures.
- Spent approximately 8 months embedded within the internal Linux Operations/Engineering team, supporting production and development infrastructure across the business.
- Carry out infrastructure tasks including OS installations, RAID configuration, LVM/disk management, firewall rules (iptables/nftables), and performance tuning across customer and internal environments.
- Manage customer communications for maintenance events and service changes via Mailchimp automation integrated with Ubersmith customer data.
- Participate in on-call rota for high-priority incidents, with direct experience designing the escalation and paging automation that supports it.

L1/L2 Web Hosting Support Engineer

THG Ingenuity Cloud Services • September 2020 – November 2021

- Delivered technical support for shared hosting services including DNS, web, email, SSL, and CMS troubleshooting across Linux and Windows environments.
- Diagnosed and resolved customer issues with web applications, control panels (cPanel, Plesk), and hosting configurations.
- Maintained and improved internal knowledge base documentation to support the wider team.

Infrastructure Technician Apprentice

THG Ingenuity Cloud Services • August 2019 – September 2020

- Developed foundational skills in system administration including Hyper-V, Windows Server, and PowerShell scripting.
- Supported deployment, documentation, and troubleshooting of internal systems while shadowing senior engineers.
- Completed BCS Level 3 apprenticeship programme with distinctions in scripting and business processes.

CERTIFICATIONS

- VMware Certified Technical Associate – Data Center Virtualization
- Microsoft Technology Associate – Networking Fundamentals, Cloud Fundamentals, Mobility & Device Fundamentals
- BCS Level 3 – Scripting, Coding and Logic; Business Processes
